

## Tired of Bent Jacks?

# JACK-E-UP

THE 'NO MORE BENT JACK' DEVICE

The Jack-E-Up is a revolutionary device that allows you to easily remove your A-frame trailer jack.

Experience the freedom of having no jack in the way between your trailer and your tow vehicle. Say goodbye to bent jacks and dented tailgates for good!

With the Jack-E-Up, just a few quick turns of the jack handle after hitching to your towing vehicle will release your jack. And the Jack-E-Up has benefits beyond saving your jack and your tailgate. With no more jack sticking up between your tow vehicle and your trailer, it's much easier and safer to step over your trailer tongue.

*"This product saved me from needing a hitch extension or new hitch all together...with Jack-E-Up I am able to remove my trailer jack and carry my dirtbikes in my truck with the tailgate down. Many benefits become apparent when you attach it. Initial install took under 8 minutes. I would recommend to anyone. Great product and customer service."*

- Steve Lembke  
California

## Dented Tailgates?

Hookup is faster, safer and easier than ever. Each time you hitch up and tow a trailer behind your vehicle, you will appreciate the convenience and security offered by the Jack-E-Up. It is the "No More" device - "No More" bent jacks, "No More" dented tailgates, and "No More" frustrating wasted time and money!

The Jack-E-Up is designed to fit on any A-frame jack with a standard 2" round jack stem. That includes top-wind jacks, side-wind jacks and electric jacks. There's even a Jack-E-Up for jacks with round base plates.

And now, with Jack-E-Hand as an additional option, you'll always have a handy place to store your jack right on your trailer.
